## **<Photo #1: Prelos™ Processor from Orenco Systems®>**

The Prelos™ Processor is the core of a Prelos Sewer: pressurized, liquid-only sewer. The Processor is a complete unit that includes several long-lifespan components and provides primary wastewater treatment and solids removal at the source.

## **<Photo #2: AdvanTex® AX-Max™ Treatment from Orenco Systems®>**

The AdvanTex® AX-Max™ Wastewater Treatment System is pre-plumbed and easy to install, either individually or in multi-tank arrays. Its compact, modular design makes wastewater treatment available when and where it's needed.

## **<Photo #4: DuraFiber™ Building from Orenco Composites™>**

DuraFiber™ Buildings from Orenco Composites™ are ultra-strong, lightweight, and virtually maintenance-free. They're made of fiberglass using a closed-molding, single-piece construction process and are available with a variety of special options, including windows, heating, cooling, and lighting.

## **<Photo #5: OLS-Series Control Panel from Orenco Controls™>**

The OLS-Series control panel from Orenco Controls™ features a smart-logic controller and user-friendly interface graphics that make it simple to operate. It's ideal for a variety of pumping applications, including wastewater lift stations, stormwater pump stations, and sludge pumping.
