# DuraFiber<sup>TM</sup> COVERS

## EXAMPLE TANK COVERS

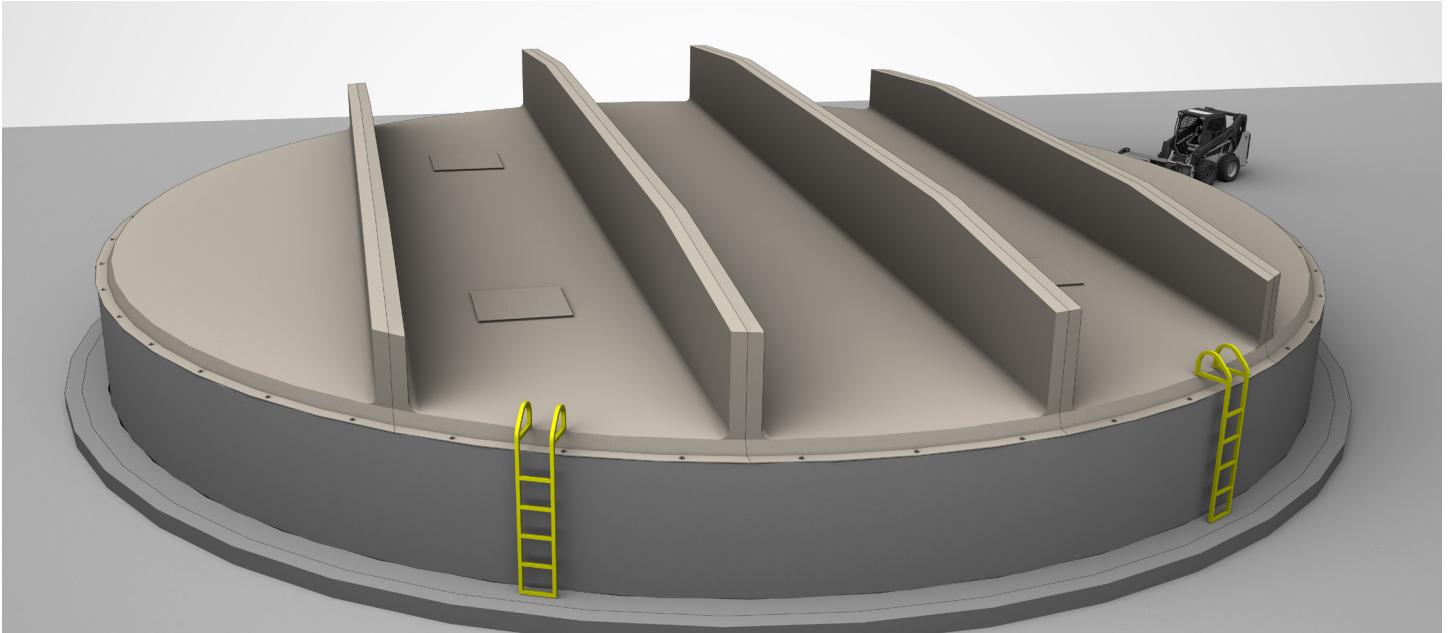

## LIGHTWEIGHT FRP COVERS FOR WATER, WASTEWATER, AND INDUSTRIAL TANKS

Many large tanks used for industrial and wastewater processing are uncovered. These tanks often emit undesirable odors or suffer from process inefficiencies and increased energy usage because they lack a well-designed, insulated cover system.

Orenco Composites<sup>TM</sup> offers large, prefabricated fiberglass (FRP) covers, custom designed for both existing and new tanks. Our molded covers are integrally insulated sandwich structures that greatly simplify installation by eliminating the hundreds of joints and fasteners seen in other covers that are designed with off-the-shelf fiberglass pultrusions or aluminum extrusions.

## **STRONG, LIGHTWEIGHT, AND CORROSION RESISTANT**

DuraFiber™ covers are vacuum-infusion molded using high-strength fiberglass fabrics and are ideal for many highly corrosive environments. Our FRP covers are often the most cost-effective, long-term solution for many water, wastewater, or industrial applications.

### **ORENCO COMPOSITES**

Orenco Composites is a division of Orenco Systems®, Inc., headquartered in Oregon, USA. We've been manufacturing strong, water-resistant fiberglass products for more than 30 years. Orenco's engineers are nationally recognized experts in fiberglass product development and manufacturing.

### **FEATURES**

- Long spans with single-piece covers
- Built-in truss system
- Insulation values up to R60
- Nonslip coating
- Round or rectangular designs

### **APPLICATIONS**

- Odor control
- Treatment process control
- UV protection
- Algae barrier
- Safety/tank access
